

WHY YOU SHOULD STUDY STAGE 1 EARTH & ENVIRONMENTAL SCIENCE

Learn about what our planet does for us, the trouble it's in and take action to save our home.

Clean air to breathe

Our planet provides us with the essential air we need to survive. 50% of oxygen comes from the land and the other 50% comes from the ocean. We need to look after these environments so they look after us.

Food on the table

Our planet grows the food we need to survive. Soil quality is essential for strong growth of plants. We need to understand how to rejuvenate our soil so our planet can keep providing for us.

Water to drink

Our planet provides us with water. Less than 1% of all water on Earth is drinkable meaning we need to learn how to protect the little water we have.

Materials to make

Our planet has all the materials to make anything we desire. However, these materials are limited therefore we need to learn how to use materials sustainably.

Feel comfortable

Our planet's ocean and atmosphere circulates heat to keep us comfortable. This is a balancing act meaning we need to learn how to not upset the balance.
